The main goal of the project is to create a living urban space accessible to all, meeting the needs of the employees of BPS and the residents of the "Mladost 4" neighborhood.

A series of surveys, interviews and working groups conducted with the local community prove the need for outdoor work spaces, place for culture, a sports and games area on the territory of the complex. The output information serves as a starting point for a brief and strategy for the roof's functional program.
