

7 ECO VILLAGE HOUSE

architectural Identity

share Sofia 2019

The **project** is situated in the beginning of Rodopy Mountains closed to the old town of Plovdiv. The central position of the house near all the historical monuments and places brings the possibility of the owners to be attractive for the tourists as it is nowadays a guest house.

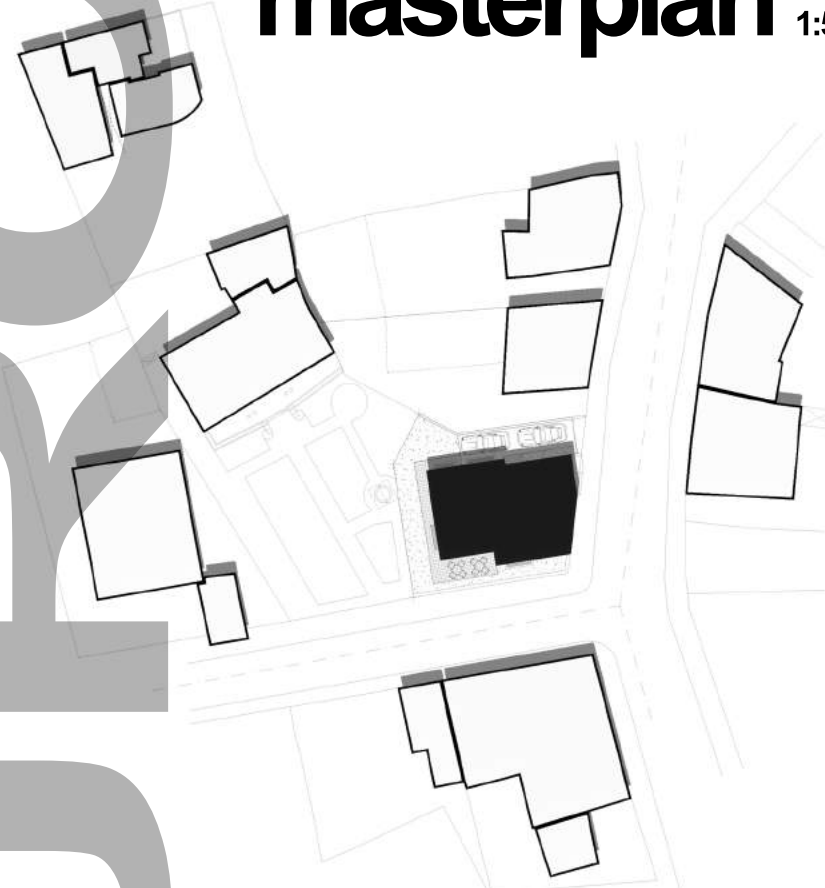

The external part of the architectural composition is well related to the Bulgarian architecture of the region and fits with the existing context. The natural materials such as **stone** and **wood** makes the building eco on one side and sustainable on other. The **thermal insulation** and **ventilated facade** and roof in addition reply to the local climat. The interior design is contemporary. The idea is to create perfect relation between the "old" (external part) and "new" (internal part). **Glass, wood** and **granite** are mainly the materials used.

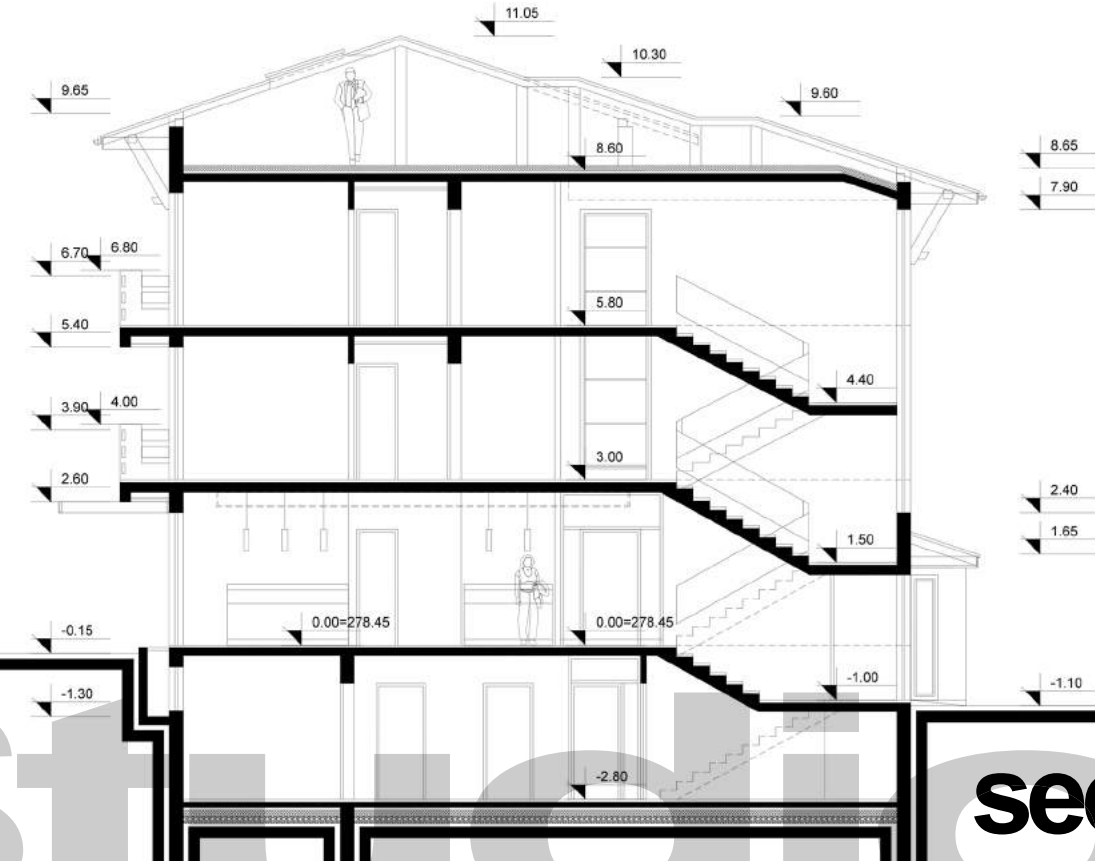

typical floor 1:100

masterplan 1:500

south elevation 1:100

section 1:100

The construction part is resolved by light concrete and striped base. The space between the last slab and the roof give a possibility of the building to breath creating ventilated facade and roof. Solar panels used for hot water makes on other hand sustainable the project.
